SKILLS

Data & analytics

SQL (PostgreSQL, MySQL), Python (pandas, NumPy), basic mathematical statistics, Excel/Google Sheets

BI & infrastructure

Power BI (DAX), Yandex DataLens, Apache Airflow, Git/GitHub, Jupyter Notebook

CERTIFICATES

Google Data Analytics

Professional Certificate — Dec 2025

Google IT Automation with Python

Professional Certificate — Apr 2026

LANGUAGES

Russian — native

English — B1

Kazakh — basic

SUMMARY

Data analyst with experience in operational analytics, report automation, and building analytics infrastructure: SQL, Python, Airflow, and BI tools. My strongest skill is building end-to-end analytics: from raw data in several sources to data marts, dashboards, and business recommendations. Looking for a position in product or business data analytics.

EXPERIENCE

Prosto Back-office — Operational Analyst

Almaty · March 2026 — present

- Automated task-completion reporting: a process that used to take up to several weeks of manual work now runs in a few minutes.
- Built a Python tool (pandas, openpyxl) that processes Excel reports, matches reference data, and calculates SLA by team — 1 final report instead of manual checks across several files.
- Reduced dependence on manual calculations and lowered the risk of data errors in reporting.
- Developing a system that analyzes client conversations to find errors, SLA violations, and disputed cases.

SMALL — Data Analyst Intern (practice)

Almaty · May 2026 — July 2026

- Built an ETL pipeline with Apache Airflow: 4 DAGs loading 11 tables from 2 sources (MySQL, PostgreSQL) into the RAW layer of an analytics database.
- Designed 6 data marts: orders, sales, RFM customer segmentation, country/city scoring, and warehouse performance.
- Created 5 dashboards in Yandex DataLens, including a warehouse-location dashboard with 11 charts (demand map, scoring, WMS metrics).
- Delivered a data-based recommendation for a new distribution center location: identified the leading market with 31% of all delivered orders.

PROJECTS

SLA Reporting & Data Reconciliation

Apr 2026

- Python tool for processing Excel reports and calculating SLA by team: matching data across several files, handling statuses, generating a final report.

Power BI Air Quality Dashboard

May 2026

- Dashboard analyzing PM2.5, NO2, temperature, and precipitation: visualizations, filters, DAX measures, comparison across cities and months.

PM2.5 Air Quality Research in Almaty

2026 · university research project

- Python analysis of PM2.5 data for 2021–2025: data cleaning, statistical tests (t-test, chi-square), charts, and the Results section for a university research paper. Owned the analytical core and built the daily PM2.5 dataset.

EDUCATION

Narxoz University — Bachelor, Digital Engineering

Almaty · Sep 2023 — Jun 2027 · GPA 3.71/4.00
